Product Description

Dual-axle Boat & Jetski Trailer with 2000kg ATM Capacity

Product Overview

This dual-axle galvanized boat trailer is engineered for small to medium-sized boats and jet skis, featuring a maximum total mass (ATM) of 2000kg. The dual-axle configuration delivers superior driving stability, enhanced load-bearing capacity, and improved road safety compared to single-axle alternatives, making it ideal for transporting heavier or longer watercraft.

Construction & Features

Robust Structure & Materials

Built from high-strength hot-dip galvanized steel, this trailer offers exceptional corrosion and rust resistance. It withstands long-term exposure to seawater, salt spray, and humid conditions, ensuring extended service life and durability.

Dual-Axle System

Equipped with two wheel axles and four tires, this design effectively distributes loads, reduces individual tire pressure, and enhances stability and braking safety during high-speed transportation.

Hull Support System

Multiple adjustable roller brackets in the middle and rear sections accommodate various boat bottom shapes, ensuring secure fitting during transport while preventing sliding and hull damage.

Towing & Positioning

Features a foldable winch stand with guide wheels for precise boat loading, plus an independent support wheel (jack) for stable parking when disconnected from the tow vehicle.

Safety Features

Includes standard tow hook, safety chains, braking system (configuration dependent), and turn/brake signal lights—fully compliant with road transport safety regulations.

Ideal Applications

Heavy Boat Transport

Perfect for small to medium fiberglass boats, aluminum boats, fishing boats, or large jet skis approaching 2-ton capacity.

Long-Distance Transport

The dual-axle structure provides exceptional high-speed stability for extended journeys from residential areas to lakes, rivers, or coastal destinations using pickup trucks or SUVs.

Commercial & Rental Operations

Excellent for boat rental companies, water sports clubs, and fishing operations requiring frequent boat scheduling, customer deliveries, or equipment maintenance. Built to withstand high-intensity commercial use.

Event & Rescue Support

Ideal for rapid deployment and recovery of competition boats in water sports events, or as logistical support for rescue teams transporting emergency watercraft and equipment.

Complex Terrain Handling

Outperforms single-axle trailers on uneven roads and ramps, making it suitable for transporting boats from rugged land storage areas to boat ramps with confidence.
