Dual Axle Mobile Generator Light Tower Trailer, ATM 2000KG, Portable Lighting Tower Trailer

Our Product Introduction

Basic Information

Product Specification

- Trailer Dimensions: 3650mm*1800mm*770mm
- Internal Dimensions: 2450mm*1300mm
- Drawbar: 1200mm
- Surface Treatment: Hot-dip Galvanizing
- Color: Silver
- Light: LED ADR Light
- ATM: 2000kg
- Guide Wheel: Guide Wheel
- Fully Welded: Yes
- Patterned Panel: 2.3 Pattern
- Leaf Spring: 6 Leaf Springs
- Beam: 80*40*3mm
- Tire: 185R14C
- Brake: Impact Brake
- Plug: 7-pin Flat Plug

Our Product Introduction

Product Description

Dual-axle Mobile Light Tower Generator Trailer, ATM 2000KG

Product Introduction & Advantages This dual-axle mobile light tower generator trailer is specially built to carry light tower and generator units, widely used for construction sites, road maintenance, emergency rescue, mining and outdoor night operation. It is fully compliant with Australian and New Zealand road regulations, with reliable load capacity and outstanding durability.

1. Robust fully welded frame & high load-bearing structure The whole frame adopts full welding process, with beam specification 80403, matched with 6-leaf leaf spring suspension. Stable supporting structure guarantees reliable load performance under ATM 2000KG rating. Dual axle design greatly improves towing stability, effectively reducing sway on bumpy roads, suitable for frequent outdoor transfer. The patterned 2.3 panel strengthens surface rigidity and anti-slip performance.

2. Hot-dip galvanized finish, excellent anti-rust & low maintenance Whole trailer surface is hot-dip galvanized, forming a firm metallurgical zinc-iron alloy layer. It can resist moisture, mud, coastal salt spray and ultraviolet erosion. Even if the surface is scratched, the zinc layer can provide sacrificial anode protection to avoid rust spreading. Far longer service life than painted trailers, greatly cut later maintenance cost.

3. Safe and reliable braking & lighting system, road legal for AU/NZ Equipped with impact brake system, sensitive and stable braking response, no extra electric brake controller required, easy to match with most towing vehicles. Fitted with ADR-certified LED lights, fully meet Australian Design Rule requirements, high brightness, shock resistant and long service life, ensure clear signal visibility for night towing and low-light job sites.

4. Practical humanized configuration, easy to maneuver and connect Comes with 8-inch guide wheel, convenient for manual moving and positioning on site without towing vehicle. Standard 7-pin flat plug, which is the mainstream specification for Australian & New Zealand market, stable electrical connection for lights and brake signals, plug and play. Drawbar length 1200mm, reasonable overall dimension (365018007770mm), internal cargo space 2450*1300mm, enough space for light tower and generator installation. Tire size 185R14C, strong load capacity, adapt to various complex road conditions.

5. Complete certification support, easy registration Passed DOT / NHTSA / FMVSS / WMI / VIN / MID certification. Complete formal documents support local registration, road driving and inspection in Australia and New Zealand, no compliance trouble for your commercial rental and project use.
